

Babloo Kumar Sah

QA Automation & Manual Testing | GenAI/ML/LLM for QA Innovation

Delivering smarter, faster, and more reliable releases with GenAI/ML/LLM-powered QA automation.

Objective

QA Automation Specialist with 6+ years of experience, blending deep testing expertise with modern tools and AI-first thinking. I'm now focused on redefining quality engineering using Generative AI, Cloud AI, and intelligent automation. Proficient in Python, JavaScript (JS & TS), and Playwright, I build smart, self-evolving test systems that scale with product velocity. My mission is to shift QA from reactive testing to proactive quality intelligence—where bugs are predicted, prevented, and quality is continuous by design.

Education

IK Gujral Punjab Technical University

Computer science and engineering (CSE) Bachelor of Technology(B.Tech))

Punjab

July 2015 - July 2019

Experience

Metafic | QA Automation Engineer/ Gen AI

Bengaluru | July 2022 - Oct 2025

At Metafic, I worked as a QA Automation Engineer on both an eCommerce platform and an AI-based chatbot solution. I was responsible for automating critical user flows like login, search, checkout, and admin actions using Playwright with JavaScript/TypeScript, along with Selenium and Pytest. I also tested AI chat and voice assistants by verifying intent recognition, response accuracy, and handling of audio-related edge cases such as mic access issues and noisy environments. I used Generative AI to generate test cases, create test data, and improve overall test efficiency.

Key Responsibility: Designed and implemented automation for chatbot and audio testing, and integrated it into CI/CD pipelines for faster, stable releases.

Intelligaia Pvt. Ltd. | QA Automation Engineer/ Gen AI

Panchkula | May 2021 - July 2022

During my time in QA, I have worked extensively in both manual and automation testing to ensure high-quality software delivery. At Intelligaia Pvt. Ltd., I contributed to a POS (Point of Sale) system project, where I designed and executed test cases, automated repetitive scenarios, and integrated test scripts into CI/CD pipelines to speed up releases. My work focused on validating key functionalities like billing, inventory management, and hardware integration. This hands-on experience helped improve test coverage, reduce manual effort, and ensure smooth and bug-free software deployments.

Meon Technologies Pvt. Ltd. | Quality Assurance

Noida | June 2019 - Apr 2021

During my time at Meon Technologies Pvt. Ltd., I worked on the development and quality assurance processes for the KYC (Know Your Customer) and REKYC (Re-Know Your Customer) project. As a QA engineer, I created and executed test cases to ensure the modules met compliance and security requirements.

I collaborated closely with the development team to identify areas for improvement, ensuring the project adhered to regulatory standards and fulfilled client expectations. Additionally, I automated key testing tasks, improving efficiency and accuracy. This experience highlights my ability to handle complex regulatory requirements and deliver reliable, client-focused solutions.

Skills

Programming Languages: Python, JavaScript (JSX and TypeScript)

Libraries/Frameworks: Pytest, Selenium, Playwright(JS/TS), Cypress, Katalon Studio, Claude.ai, NumPy,

Tools / Platforms: Appium, BDD Framework, UX Bug Reporting Functional Testing, System Testing, Acceptance Testing, Integration Testing, Smoke Testing, Regression Testing, API Testing, CI/CD(GitHub Actions, Jenkins), V0.dev/bolt.new AI, Defect Tracking and Management, Automation Testing, Strong Analytical and Problem-Solving Skills, Manual Testing Methodologies and Techniques-

Test Case Design, Test Execution, Software Quality Assurance, Test Plan Development, Automated Test Scripting, Software Development Lifecycle, User Acceptance Testing (UAT), Collaboration and Teamwork, Performance Testing, Web Testing, Test Planning and Strategy, Quality Assurance Principles, Problem-Solving Abilities, Black-box and White-box Testing Techniques, Security Testing, Test Reporting and Documentation, Behave, RestAPI, Test Rail, UX Bug Reporting, Android Studio, XCode, Confluence, Docker, Kubernetes. GitLab and AI-driven testing, , JMeter, JUnit, Jira, Git & GitHub, Figma, Trello, Postman, ChatGPT, Excel, SDLC, Waterfall, Spiral, Hybrid and Agile Model, STLC, Mobile Testing, LLM, GenAI/ML, AWS/GCP, Cursor AI, F1 Score, OpenAI API, LangChain, Prompt Design and Natural Language Understanding (NLU), Batch Testin, Docker.

Databases: SQL, MongoDB

Projects:

Voice-based Restaurant Order-Taking AI system

Metafic

Tools used: Playwright (JS/TS)/ Selenium , JMeter / Locust – to simulate multiple users placing orders at once, Jira, CI/CD pipeline, Git & Github, APITesting, GCP, LLM, Gen AI/ML and Allure Report, Rasa Enterprise – conversation review, model validation, and training improvements, Postman, Google Speech-to-Text, Python (Pytest, BDD, Requests)

The project is a Voice-based Restaurant Order-Taking AI system built on the Rasa Framework. Customers interact with the platform through voice commands to place food orders, customize items, check menu details, and confirm payment options. The system uses Speech-to-Text (ASR) for input, Rasa NLU/Core for intent and dialogue management, and Text-to-Speech (TTS) for responses. QA ensures that the system provides an accurate, smooth, and user-friendly ordering experience, even in noisy environments or with diverse accents.

Roles & Responsibilities

Requirement Analysis

- Review conversation flows, intents, entities, and stories defined in Rasa for restaurant ordering.
- Understand menu structures, order modification flows (add/remove items), and payment confirmation steps.

Test Planning & Scenario Design

- Design test cases for:
 - Menu queries (e.g., "What pizzas do you have?").
 - Order placement (e.g., "I'd like 2 medium pepperoni pizzas").
 - Customization (e.g., "Add extra cheese, no onions").
 - Order confirmation & payment (e.g., "Yes, confirm order with card").
 - Edge cases (background noise, incomplete orders, silent input).

Automation Testing

- Worked closely with the product and development team to understand restaurant order-taking flows, intents, and entities in Rasa.
- Designed and executed test cases for menu queries, order placement, item customization, and payment confirmations.
- Tested voice interactions across different accents, background noise levels, and incomplete orders to ensure smooth customer experience.
- Tested voice interactions across different accents, background noise levels, and incomplete orders to ensure smooth customer experience.
- Use Rasa test framework (rasa test nlu, rasa test) to validate intent/entity accuracy.
- Create Python-based automation scripts with Speech APIs to simulate customer voice orders.
- Checked ASR (Speech-to-Text) and TTS (Text-to-Speech) accuracy with Google Speech API and gTTS.
- Reported defects like misclassified intents, wrong menu mapping, or incomplete order flows in Jira, and collaborated with developers to improve training data.
- Validated integration with POS systems, kitchen display units, and payment gateways for a seamless order journey.
- Actively participated in model re-training cycles by reviewing conversation logs in Rasa X and suggesting improvements.
- Used Rasa test framework and Botium for validating intents, entities, and end-to-end conversations.

eCommerce Web, Mobile Application & Admin Dashboard

Metafic

Tools used: Playwright(JS/TS) ,Appium, Jira, Git&Github, BDD, APITesting, AWS EC2, Jmete, LLM, Gen AI and Allure Report

An eCommerce web application facilitates online buying and selling of goods and services. It enables users to browse products, add items to a cart, securely make payments, and track orders. Admin functionalities include managing product listings, inventory, user accounts, and processing orders. Key features often include user authentication, product search and filtering, reviews and ratings, order history, and secure payment gateways.

Roles and Responsibilities for Manual and Automation QA in an E-commerce Application (Web & Mobile):

Automation QA Responsibilities:

Intelligaia

- Develop and maintain an automation testing framework using Python, Selenium, Appium, Pytest, and BDD
- tools like Behave.
- Make it modular and reusable for both web and mobile platforms.
- Automate workflows such as product search, add-to-cart, checkout, and payment processes.
- Validate API responses and backend processes using automation.
- Automate mobile app testing for Android and iOS using Appium.
- Ensure the application works across different browsers and devices using automation.
- Test integrations with third-party services like payment gateways, shipping APIs, and analytics tools.
- Use tools like JMeter or equivalent to check app performance under high traffic and heavy loads.
- Debug failed test scripts, update automation suites for new features, and maintain test reports.
- Integrate automated tests into CI/CD pipelines for faster deployments.
- Maintain automation scripts and generate test coverage and execution reports.

POS System(Web, Desktop and Mobile Application) & Admin Pinner

Tools used: Selenium, Python, Pytest, Allure, Jira, Git, BDD, API Testing, AWS EC2

The project was conceptualized to address special pain points within the retail industry, aiming to streamline transactions, inventory management, and sales reporting.

Role and Responsibilities for a Manual and Automation QA in a POS System Project:

Automation QA Responsibilities:

- Build an automation framework using Python, Selenium, Pytest, and BDD tools like Cucumber or Behave, API Testing, JS, Jmeter.
- Make the framework reusable and easy to maintain.
- Automate important test cases like regression, workflows, and repetitive tasks.
- Test UI, APIs, and hardware integrations using automation.
- Run automated test cases regularly and connect them to CI/CD tools like Git and GitHub.
- Update scripts when there are changes in features.
- Use tools like JMeter to check how the system performs under heavy load.
- Simulate high transaction scenarios to identify bottlenecks.
- Analyze failed tests, debug errors, and report them to the team. Keep proper logs of all test executions.
- Suggest better tools or techniques to improve testing.
- Work towards reducing bugs in production.
- Write proper documentation for automation scripts and share test coverage reports.

Certifications

- Python - Naresh i Technologies.
- QA / MANUAL / AUTOMATION TEST ENGINEER - Udemy.
- Figma and Playwright(JS/TS) - Udemy.
- Gen AI/ML Engineer- ExpertPro
- Prompt Engineer- Coursera.org

Honors & Awards

- Best software project in College Tech fest "PRAYOG"
- Second Position in web Development
